

PROFESSIONAL OVERVIEW

PHIL WONG

JUNIOR SOFTWARE ENGINEER
ARCHITECTURAL DESIGNER

As someone with an architectural design background, I strive to provide solutions that are both pragmatic and considers the user experience. I have a critical eye for detail and enjoy the satisfaction of solving problems in a creative way. My past roles in an architectural office and at Brisbane City Council has led me to develop excellent stakeholder engagement and project management. I have proven myself in the office as someone who is dedicated, dependable and works well in both a team-oriented or autonomous environment. I take pride in being a quick study and consistently strive to improve the skills of my team and myself.

My passion for design and building has led me to pursue software engineering where it not only satisfies my curiosity and thirst for knowledge, but also further honed my attention to detail and methodology in solving complex problems. I am excited to utilise the recently acquired software development skills to integrate them with my design workflow and produce aesthetic solutions for the users.

It is important to me that the company I work for inspires growth and provides opportunity to progress further in my career. I am prepared to step into a role that is both challenging and enriching and have ambitions to mentor and lead.
